

Revasum and JingSheng Announce Manufacturing Agreement

November 20th, 2017

Revasum announced today that JingSheng and Revasum have entered into a manufacturing agreement to address the growing demand for 200mm prime silicon wafers.

Recently, Jerry Cutini, CEO of Revasum, and his team visited JingSheng. Both parties, JingSheng and Revasum, agreed to enter into a manufacturing agreement to manufacture select Revasum equipment. This agreement allows Revasum to share its technology expertise while utilizing JingSheng's advanced manufacturing capabilities, supply chain, and market channels and service support team for China. The companies will work together to develop improvements to address new requirements for advanced 200mm prime silicon wafer production. The semiconductor industry continues to have an acute shortage of 200mm wafers and equipment amid a surge of demand. The cooperation agreement enables Revasum and JingSheng to support the semiconductor industry in fulfilling demands for advanced wafer production capacity.

JingSheng will begin building certain products for Revasum in late 2018 in their manufacturing facility in Shengyu, China. JingSheng will also be providing sales and service in China. Revasum will continue to support customers outside of China.

Dr. Jianwei Cao, Chairman of the Board and President, JingSheng, reports that "JingSheng has a strong manufacturing and engineering team with a successful history of supporting customers in the wafer manufacturing business."

The agreement allows for the two companies to add new products to the program as the markets for Revasum's products continue to grow and as customer demand increases.

Jerry Cutini, Chief Executive Officer, Revasum explains that "the synergy between the two companies extends beyond their manufacturing capability to their focus on customer service and support in China, which is the fastest growing market for our equipment."

About JingSheng

Jingsheng is a Chinese Semiconductor and Photovoltaic Equipment listed in Shenzhen Stock Exchange. Founded in 2006, then listed in A Stock Growth Enterprise Market, Jingsheng is a world class technology leader of Semi/PV Silicon Growth and Fabrication equipment. Jingsheng mainly focus on PV Production Equipment, Semiconductor Equipment, Sapphire Materials and Factory Intelligent Solution territory.

About Revasum

At Revasum, we are dedicated to helping our customers succeed. We manufacture advanced CMP and grinding equipment that reduces operating costs and increases productivity. Revasum acquired technology from Strasbaugh in 2016. Using this core technology, our products are targeted for critical growth markets, such as silicon wafer production, power, RF communications, LED, MEMS, and other mobile applications. Located in San Luis Obispo, CA, Revasum manufactures new and certified refurbished systems for sale worldwide.
